

LUXURY HOUSING SALES ANALYSIS – BENGALURU

REAL ESTATE ANALYTICS PROJECT

PRESENTED BY : ABITHA

DOMAIN: Real Estate | Business Intelligence | Data Analytics | Urban Market Research

TOOL STACK:

Python | SQL | Power BI

Project Overview

This project analyzes Bengaluru's luxury real estate market using Python, SQL, and Power BI.

The dataset includes 1,00,000+ property records covering pricing, configurations, buyer profiles, sales channels, booking status, and possession stages.

Python was used for data cleaning and feature engineering, SQL for structured storage and validation, and Power BI for interactive dashboards.

The analysis delivers insights into market trends, builder performance, booking conversion, and geographical distribution, and top-performing builders.

Business Objective

- Analyze luxury housing sales trends
- Identify top-performing builders and locations
- Understand buyer behavior and booking conversion
- Support data-driven real estate decision-making

DATASET OVERVIEW

Dataset size: 1,00,000+ records

Key Attributes captured

Builder / Developer

Micro_Market

Ticket_Price_Cr

Configuration

Booking_Status

Sales_Channel

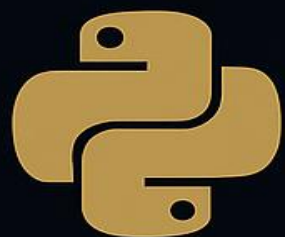

Possession_Status

PROJECT ARCHITECTURE

Analytics Workflow

Python

Python:
Data
preparation

SQL

SQL:
Storage and
validation

Power BI

Power BI:
Visualization
and insights

DATA CLEANING

Loaded raw CSV using Pandas

Standardized inconsistent formats
(price, text fields)

Handled missing and null values

Normalized categorical columns

FEATURE ENGINEERING

Created analytical features:

- Price_per_Sqft
- Quarter_Label
- Booking_Flag

Prepared clean dataset for database insertion

SQL: DATA LOADING

- Designed relational table schema
- Inserted cleaned data using Python and SQLAlchemy
- Enabled structured querying for analysis

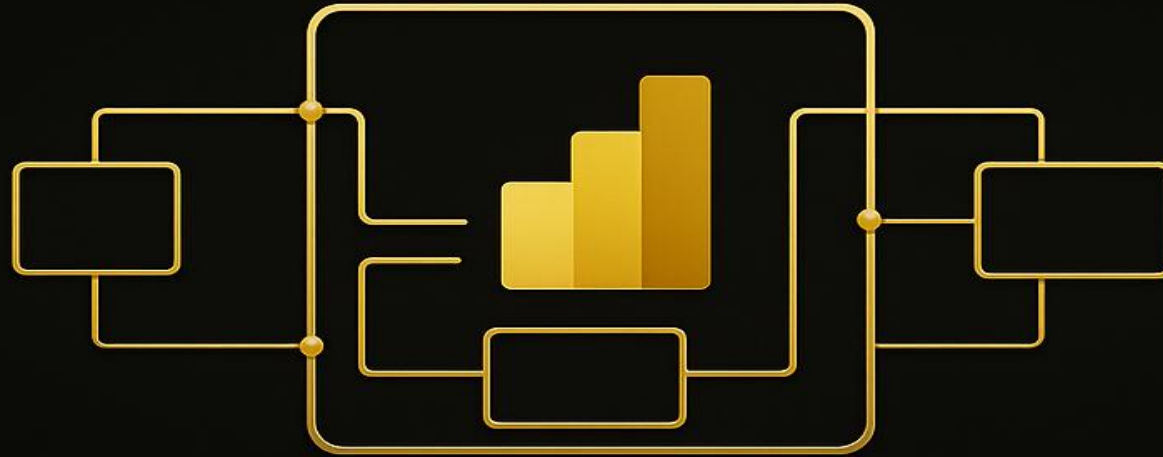

SQL: Data Validation

- ✓ Validated total record counts
- ✓ Verified revenue aggregation by builder
- ✓ Checked average amenity score across micro-markets
- ✓ Ensured data integrity and consistency

POWER BI

Data Modeling

🔗 Connected Power BI directly to SQL database

⚠️ Built optimized data model and DAX measures

🔧 Enabled interactive filtering and aggregation

Market & Builder Analysis

Analyzed quarterly booking trends

Compared builders by total revenue and ticket size

Identified top-performing builders

Booking & Demand Analysis

Evaluated booking
conversion rates

Analyzed demand
by configuration
(3BHK / 4BHK / 5BHK)

Studied amenity
impact on booking
success

Luxury Housing Market – Bengaluru

Sales & Location Insights

- Compared sales channel efficiency
- Analyzed possession status influence
- Visualized geographical distribution of luxury projects

KEY BUSINESS INSIGHTS

- Certain builders dominate luxury revenue
- Specific micro-markets show higher demand
- Sales channel selection impacts conversion
- Amenities positively influence booking success

Conclusion

Demonstrated a complete end-to-end analytics pipeline

Converted raw data into business insights

Built enterprise-ready dashboards

Project showcases strong analytical and visualization skills
